

## EXPERT SPOTLIGHT

# Harry Malave

## Senior Environmental Advisor

### MEMORABLE EXPERIENCES

I once had the opportunity to survey NASA's Vehicle Assembly Building (VAB) at the Kennedy Space Center for lead and asbestos. The VAB is the tallest single-story building in the world and is where they assemble and stack space shuttles onto their launcher platforms. I remember being in awe of the enormous building and machinery around me, knowing I was walking the same halls as some of the greatest astronauts in history.

### ADVICE

Take advantage of every development opportunity that comes your way. Throughout my career, I've been able to earn several certifications and licenses that have helped me grow and stay competitive in my field. There will always be something new to learn, so it's important to stay curious and be proactive in expanding your skill set.

### CARING COUNTS

Thanks to EFI Global's development opportunities, I'm always learning how to perform more thorough building inspections and provide stronger recommendations. This not only helps me take better care of our clients but also helps them create a safer work environment for their employees.

“*I show how caring counts by continually strengthening my ability to serve our clients.*”

*Based in Florida, covering the eastern United States*
