Time and material estimating software

T&M Pro-suite

To create a thorough project estimate, contractors need to gather pricing and data from multiple sources and ensure that data is reflected accurately in the bill. With Sedgwick's T&M Estimator software, they can access all of the information needed to develop detailed estimates and connect seamlessly with T&M Pro, our billing software, ensuring consistency in the billing process.

Making estimating easier

With T&M Estimator, contractors can create a detailed estimate, rough order of magnitude (ROM) or not to exceed (NTE) quote using the software features built into the program. T&M Estimator includes many of the functions and safeguards contained in T&M Pro, giving contractors the ability to create accurate, consistent and transparent estimates before projects begin.

This innovative program allows contractors to create extremely detailed estimates and projections that include an appraisal of each billable category. T&M Estimator is a true asset to any company when it comes to project management. The key features below provide advantages for contractors:

- The software is aligned with the price lists and settings in T&M Pro, preventing billing errors and pricing differences
- The same files are used to create an estimate, ROM and NTE
- An estimate summary is created automatically and exported to T&M Pro for an estimate to actual comparison
- The program meets all industry standards

Time and material software solutions

T&M Estimator is part of T&M Pro Suite, a premier billing and data management system developed for the property loss industry. T&M Pro Suite combines several applications into one software suite to help contractors fully align commercial projects with billing and estimates. The system includes various options to help contractors complete bills for complex projects, develop detailed estimates and upload data while on the job. T&M Pro Suite can be used in any location and, once installed, web access is not needed. Additional benefits include on-site data validation, centralized project information and 24/7 technical support.

Industry expertise

We understand contractors' needs when it comes to project billing and estimating because our software suite was built by Greg Dillon, a contractor who is also the industry's time and material expert. Our experienced team understands the field and ensures our intuitive applications work together seamlessly to provide a comprehensive system for contractors.
