

Drone services

Elevated solutions for risk management, underwriting and claims

Drones are an eye in the sky, providing a unique perspective to your claim or loss. They can enter the loss area and capture data without disturbing the scene or any ongoing operations. At Sedgwick, we provide a line of aerial services from risk management analysis while writing a policy, to complete coverage from time of loss through mitigation and restoration.

Key benefits provided by drones

Safer working environment

- Removing the risk of working at elevated heights
- Reducing the impact on the environment and wildlife
- Providing the ability to inspect hazardous areas from a safe distance

Expense reduction

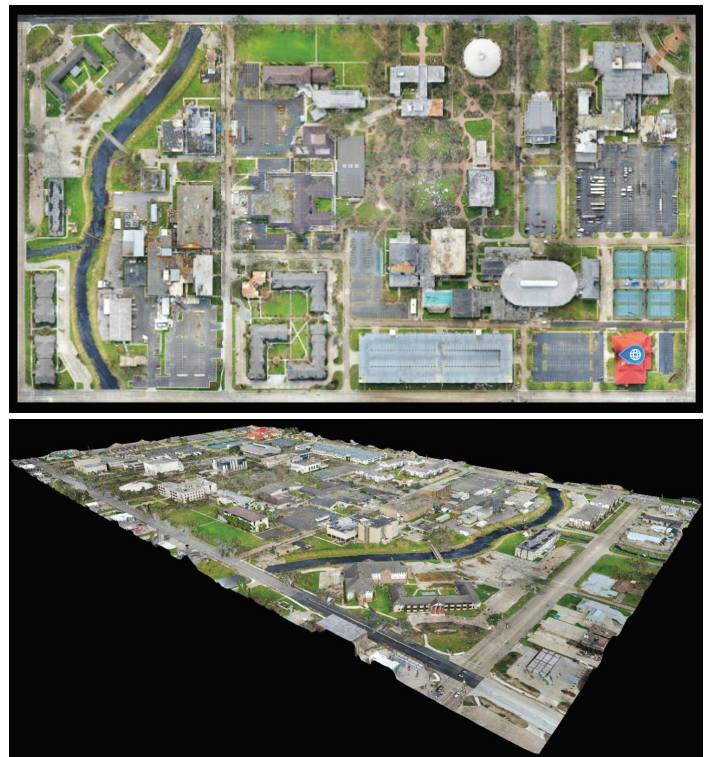

- Faster inspections
- Removal of the need for lifting equipment

Imaging features

- High resolution cameras provide quality photos and videos
- Live-streamed video allows adjusters to quickly start the claims process
- Repeatable 3D mapping and modeling bring exact data into the process for faster resolution, easier collaboration and more accurate estimating
- Thermal imagery provides a unique and useful perspective

Ease of use

- Compact size allows for ease of transportation
- User-friendly design enables rapid deployment

Drones can be useful tools for adjusting claims in all types of industries, from agriculture and farming to technology and telecommunications. Sedgwick's growing drone fleet includes over 50 operators across the country, enabling us to be on site at a loss within 24 hours to capture the important early data.
